

An information about Schneider agricultural devices

Brand New Quick Hitch Backplate For Modern Front Loaders

On modern tractors, the devices can be exchanged quickly and easily using the Euro mount on the front loader.

Changing devices is much more complicated with old pawl loaders.

To ensure that **older tractors** can also be used effectively, Schneider has been offering **retrofit options** for many years.

In addition to this need for modernisation, the quick hitch backplates on current front loaders are also subject to increasing wear. However, replacing them via the original equipment manufacturer is often time-consuming and expensive.

This is **your opportunity**: Supplement your range with our new, **high-quality quick hitches with Euro mount for modern front loaders**.

In this way, you can also reach customers who often unnecessarily delay replacing the frame for cost reasons.

With the new quick hitch backplates, you can strengthen your product range. The quick hitches are available with both **mechanical (item no. 125.017.150)** and **hydraulic actuation (item no. 125.017.170)**. You can obtain these quickly from our central warehouse in Bielefeld.
