## Roof versions series 180-2: For any purpose !

The **curtainsider kits from AluTeam** offer you as a vehicle manufacturer a **variety of roof designs**. These are technically sophisticated and highly stable.

The most important advantage of the **sliding roof** is that it can be loaded by crane. Like the other variants, this roof is not supplied as a jigsaw puzzle with countless individual parts, but as a **complete assembly group for time-saving assembly**. As with the **fixed tarpaulin roof**, you can easily attach the desired roof tarpaulins to the bows.

The **fixed tarpaulin roof** as an economical alternative involves lower acquisition costs. It also saves on maintenance costs during operation. **All different versions of the roof are available with top flaps, doors or an empty portal.**

Alternatively, you can also obtain the tried-and-tested **GRP fixed roof** for the box body kits. In addition to the lower price compared to the sliding roof, it is advantageous that the roof allows light to enter the loading area. The smooth roof skin also prevents water from collecting (water pockets), which significantly reduces the risk of ice sheets forming.

We wish you a peaceful and relaxing Christmas and health, happiness and success in the New Year!

We can't predict what new things the new year will bring. But what is already new are our Facebook and Instagram accounts.
